

During International day of Ecological education, under the framework of TEMPUSS DIAUSS project, the lecturing on the topic: ENERGY AND ENVIRONMENT - SIGNIFICANCE OF ENERGY EFFICIENCY IN URBAN ENVIRONMENT was developed and organised. The participants (38 of them) were high school teachers and students from all project partner institutions (HS1-4). The course was delivered at the premises of HS1 on 24. January 2014.

The goal of this course was to familiarize participants with relations of energy and urban environment, definition and importance of energy efficiency in future sustainable development, global energy trends, different techniques related to energy labelling, regulative and policies.
