TEMPUS DIAUSS project ended on 14.10.2014. after three years of realisation. We would like to thank to all participants that contributed to the realization of the project. We are proud to state that we achieved defined outcomes and develop and implement interdisciplinary bachelor and master curricula both in automotive engineering and urban engineering at Serbian state universities (studies adjusted to the Bologna process requirements and aimed at achieving international transparency and academic and professional recognition). Project team also provided training of high-school teachers in automotive and urban engineering and developed LLL trainings for automotive industry and public service companies.

In after project period we will continue to work on dissemination of project results. Providing different mechanisms of sustainability, we are certain that this project has made permanent improvement and contribution.
