

The outcomes of defined study programs of automotive engineering

Under the mentorship of EU partners (POLITO and UNIBO) and participation of relevant national institutions (RCCK, FAS, RACCS), the specification of learning outcomes (what a student should learn as a result of automotive engineering study programs - both on bachelor and master level) was created.

They are created according to the requirements of the "Bologna 2020" European strategy: to formulate subject specialized, discipline-oriented learning outcomes as one of the most important means for the promotion of academic and professional mobility in Europe as quality requirement.

The educational objectives are outlined by the description of the learning outcomes required by the graduates for practicing their profession or for post-graduate studies. The outcomes vary in extent and intensity in accordance with the differing objectives of Bachelor's and Master's programs.
